

SetList

Complete UI Blueprint

Every screen, component, and design token in the shipped app — pulled straight from the source (`src/App.jsx` + the brand kit), not idealized. A working reference to rebuild and expand the UI in Figma, and a canvas for the screens that don't exist yet.

Source `src/App.jsx` · `brand-kit/BRAND.md`

Frame mobile · 430px max-width

Theme light-only (brand commitment)

17 screens & overlays

As of Jul 22 2026 · Phase 2 shipped

01 — FOUNDATIONS

Identity

SetList reads premium, considered, quietly confident — closer to Whoop or Strava's editorial moments than gym-app maximalism. Restrained color, real typographic hierarchy, a light white ground. No gradients, no drop shadows, no glow — anywhere.

WORDMARK

SetList

Set in near-black, **List** in brand blue — Big Shoulders Display 800, no gap between the words. Matches the in-app header exactly (SetList). Shipped as logo.svg with the font embedded.

APP ICON

Two-tone **SL** monogram — ink S + blue L, same Big Shoulders 800, on a plain white field. Ships as icon-192/512, apple-touch-icon, favicon.svg. (The old purple-gradient bolt is retired — wrong color family, uses a gradient the brand avoids.)

01 — FOUNDATIONS

Color

One accent, three semantics, cool-biased neutrals. Blue is the *only* brand color — reserved for the logo, links, exactly one primary CTA per screen, and detected/active states. Green, red, and gold are strictly semantic. Tap any swatch to copy its hex.

BRAND — BLUE ONLY

INK — TEXT, NEVER PURE BLACK

text
#0A0B0E
Primary text

mutedHi
#5F626B
Secondary text, bylines

muted

surface
#F2F3F6
Insets, set rows, dashed drops

tag
#F2F5FA
Pill / tag fill

BORDERS — HAIRLINE, 1–1.5PX

border
#E3E5EA
Default hairline

borderHi
#C6CBD6
Emphasized / featured card edge

SEMANTIC — NEVER DECORATIVE

green
#17A863
Done / success — set complete, finish CTA

red
#E04545
Destructive — delete, remove

gold
#B8860B
PR / highlight — personal records, streak

Three faces, each with exactly one job — resist adding a fourth. All free on Google Fonts (and in Figma). Sentence case for buttons and labels; small uppercase micro-labels use letter-spacing to read intentional, not shouty. (Samples below fall back to condensed/system/mono where the real faces aren't installed — the intended face is named on each row.)

Big Shoulders Display

Headings · CTAs · stat numbers ·

BORDERS • GAPS

1–1.5px

Hairline only. Component gaps 7–13px. Density from spacing discipline, not cramming.

02 — COMPONENT LIBRARY

Components

The reusable building blocks, rendered at their true values from STYLES. These always sit on the app's white canvas — SetList is light-only by brand, so the specimens don't theme-shift even when this doc does.

03 — NAVIGATION

App map & core loop

A hard auth gate wraps everything. Once inside, a persistent 4-tab bar carries the app; the extract → review → run → track loop threads across tabs and full-screen sub-views.

GATE — BEFORE THE APP RENDERS

TABS — PERSISTENT BOTTOM NAV

CORE LOOP — FULL-SCREEN SUB-VIEWS

04 — SCREEN INVENTORY

Every screen

All 17, each with its real render function, region wireframe, anatomy, and states.

Badges: GATE pre-app · TAB bottom-nav · SUB full-screen sub-view · OVERLAY modal/sheet.

Auth

GATE

AuthScreen()

The wall. No app until signed in. Google one-tap + passwordless email.

Inline demo drawer + Toast

OVERLAY

ExerciseVideoDrawer • toast

Two lightweight utilities: an expand-in-place YouTube demo, and the transient confirmation toast.

▼ expands under an exercise row → embedded YT demo

loading 🔍 / found / "no demo" states

toast – bottom-center, blue, auto-dismiss 2.2s

05 — DESIGN CANVAS

Screens that don't exist yet

The gaps worth designing next — drawn from the deferred Phase 2 items, the roadmap's differentiator strategy, and holes in the current flow. Each notes why it matters and where it maps.

Lean into the moat. Every exercise is permanently tagged with `creator_handle` + `creator_platform` — that's SetList's structural edge over 10+ extraction competitors. The creator & type browse screens below turn that data into a real differentiator, not metadata.

Creator page

All workouts & exercises from one `@handle`, in one place — the "your handle is already a category" pitch made real. Follow, browse, attribute.

MAPS TO · Layer 2 differentiator · Phase 5 community

Browse by type

Filter the whole library by the closed exercise-type set — strength / cardio / core / mobility / plyometric. Discovery beyond a single workout.

MAPS TO · Layer 2 · creator/type browsing

Profile & settings

Today "account" is a lone sign-out row on Progress. A real profile: display name, email, notifications, sign out, delete account.

MAPS TO · deferred Phase 2 · "dedicated profile screen"

Per-exercise progress

Tap an exercise → a time-series of weight/volume for it. The current Progress screen shows PRs + weekly volume, but not the trend per movement.

MAPS TO · deferred Phase 2 · "progress-over-time charts"

Resume in-progress

A refresh mid-workout currently loses the session. A "continue your workout?" banner/prompt to restore it.

MAPS TO · deferred Phase 2 · "resumable workout"

Offline & error states

No-signal library (gym reality), a failed-load retry, a cloud-sync-failed banner. Designed states, not raw toasts.

MAPS TO · deferred Phase 2 · "offline read cache"

Upgrade / paywall

Free (~5 extractions/mo) vs Pro (~\$4.99/mo). The reel-to-card moment as the hero of the pitch.

MAPS TO · Phase 4 · Stripe paywall

Branded auth email

Magic-link emails still ship from the default "Supabase Auth" template. Design the SetList sign-in email before beta testers see it.

MAPS TO · Pre-Beta watch-item

Generated from the shipped SetList source — `src/App.jsx`, `brand-kit/BRAND.md`, `STYLES / C palette` — as of Jul 22 2026, Phase 2 (Supabase accounts) live. Real faces: Big Shoulders Display · Manrope · DM Mono (Google Fonts, available in Figma). Light-only by brand.
